Phone and technical support			●
Newest features			●
Eligible for software revisions, as needed			●
Upgrade from current to the latest version		●	●
Limited phone and technical support		●	
End-of-life status	●	●	
End-of-service status	●	●	
Requires intermediate upgrade before upgrading to 9.0	●		

Version 9.0 Features

Alarm Enhancements

The latest alarm enhancements are designed to improve your monitoring experience. The new alarms summary feature provides a clear visualization, allowing users to easily pinpoint alarm locations. Additionally, the improved alarm counts on the Alarms View offer a more accurate and comprehensive overview. Finally, the new Restful API enables fast, seamless access to alarm data, enhancing integration and data retrieval capabilities.

User Privileges and Sign On

The Single Sign-On add-on now enables seamless enterprise authentication integration with OIDC and SAML 2.0 protocols, providing a more secure and efficient sign-on process. Additionally, you can now enjoy more granular control over the needs of multiple operators, ensuring that each user has the appropriate access and permissions. Finally, our new Licenses & Add-ons page consolidates all licensing and add-on administration into one convenient location, simplifying management and improving accessibility.

Setup Functionality

Set up Tree functionality has been improved, making it more intuitive and user-friendly to streamline your workflow. Additionally, we have updated the right-click configure menus to match the Set up Tree menu, ensuring a consistent and seamless navigation experience.

Additional Features

The new Security Review report now displays the contents of the sreview command, offering greater transparency and control over your security settings. With the new Resource Management utility, transferring and organizing resource files on your server has never been easier, streamlining your operations and saving valuable time. Additionally, we've made changes to SiteBuilder, Set Up Tree, and drivers to support multiple downstream IP downloads, enhancing your ability to manage large-scale deployments efficiently.
