

Shift into a UPS that is ready to power the fast growing critical network edge.

READY. SET. GO.

(shown above, battery cabinets rear view)

Fill 'er up. Matching battery cabinets will meet your backup needs. Add two more for additional runtime. Batteries are easy to connect and install to keep your IT equipment up and running.

(shown above, MBC front view with cover removed)

No need for a pit stop with an optional Maintenance Bypass Cabinet (MBC). It allows you to keep powering critical loads through service or replacement. Quick access to breakers under the front panel.

Rev up your engine with a compact 8 or 10kVA, 208/220V, three phase UPS that offers an intuitive control panel and fits in a rack or on the floor.

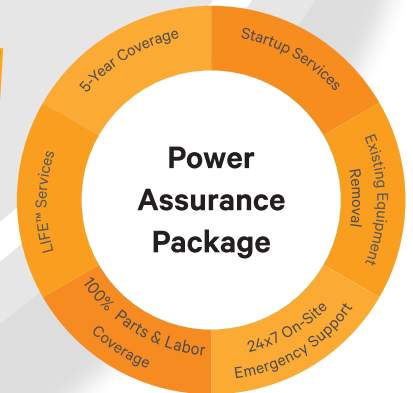

(shown above, MBC rear view with (2) PODs installed)

You're gaining speed! Select the Power Output Distribution (POD) options and mix and match distribution configurations. It's a great way to rapidly connect variable loads.

Stay in the race with the Power Assurance Package. It's a 5 year lifecycle plan to keep you going and worry-free.

Win every race. All configurations are optimized for rack or tower configuration.
