

Liebert Communication Card Mass Configuration Tool v1.0

The new Mass Configuration Tool (MCT) supports mass configuration and firmware updates for all Liebert communication cards including the IS-UNITY-DP and IS-UNITY_SNMP. Prior to MCT, users had to configure their Liebert Communication Cards individually, which for large rollouts was often time prohibitive. This new utility is a huge cost and time saver for customers.

Features

- Update up to 1,000 cards in a session
- A search feature discovers all Liebert communication card IP's on a network subnet
- The searches can be saved in a .csv format for future use
- Customers can import an existing IP list that's in a .txt format
- Simple Windows utility that does not require installation
- Available free of charge

How to get MCT v1.0?

Users can download the utility and supporting collateral on Vertiv's website:

Support > Software & Firmware >
[Liebert Intellislot Firmware Downloads](#)
