Taking Steps Towards Carbon Neutrality with Hybrid Ecosystems

Intense, urgent demand for artificial intelligence (AI) capabilities – and the dueling pressure to reduce energy consumption, costs and greenhouse gas emissions – loom large over the data center industry heading into 2024. The proliferation of AI along with the infrastructure and sustainability challenges inherent in AI-capable computing can be felt across the industry and throughout the 2024 data center trends forecast from Vertiv.

Three-Phase Power: What It Is and the Benefits It Brings

Delivering 3-phase power directly to the server rack enables you to use less expensive cabling and other components, all while delivering more power. It does, however, require paying attention to the load on each circuit, to ensure they're balanced and do not exceed circuit capacity.
